

# *Colubrina asiatica*

## LATHERLEAF

### Rhamnaceae

Common Synonyms: *Ceanothus asiaticus*, *Rhamnus asiatica*

**FLEPPC Category:** 1

**USDA Hardiness Zone:** 9B - 11

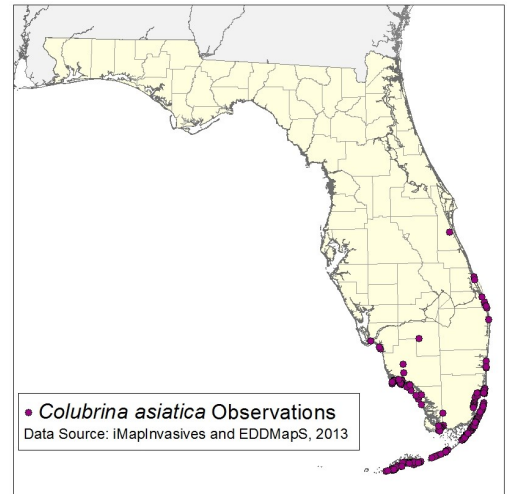

**FDACS Listed Noxious Weed:** Yes

**Growth Habit:** Shrub

**IFAS Assessment**

**Origin:** Old World

North	OK
Central	PROHIBITED
South	PROHIBITED

FNAI

**Description:** Sprawling shrub often forming a tangled mat of glabrous stems. Slender branches to 5 m. Oval, stalked, leaves are alternate, shiny dark green, 4-9 cm long with toothed margins. Flowers small, greenish white, in small clusters at the leaf axils, petals 5. Fruit a green to brown round capsule with 3 grayish-brown seeds inside.

**Note:** Similar to native *Colubrina* species and distinguished by the glabrous stems, sprawling nature, and leaf blades with serrate margins.

**Habitat:** Coastal areas including hammocks, mangrove swamps, and buttonwood forests

**Comments:** Established in south, EDRR candidate in central zone if not well established. Capsules dispersed by tides, currents, and birds.

**Florida Introduction Date:** naturalized by 1933

#### Control Methods:

Mechanical: seedlings can be hand-pulled

Chemical: Basal bark (10-20% triclopyr ester, IFAS), cut stump (50% triclopyr amine, IFAS), foliar (3% triclopyr amine or triclopyr ester, IFAS). Follow up for 3-4 weeks.

\*\*Follow herbicide labels: Only herbicides registered for application in water by EPA and FDACS may be applied to weeds growing in or near water.
