Description: Herbaceous plant arising from a pseudobulb with short lily-like leaves. Inflorescences arise from spherical to conical pseudobulbs, usually about 5-8 cm in diameter, which typically sit completely or partly above the ground. The slender inflorescences range from 30 cm to 1.5 m tall and bear up to 60 small flowers, each usually about 2.5 cm across with a white lip marked with rose-pink, with green petals and sepals.

Habitat: mulch, disturbed areas, open grasslands, beaches

Comments: This species naturalizes, but may not displace native species.

Florida Introduction Date: 2007

Control Methods:

Mechanical: Hand pull (Brown et al.)
