

Hydrilla verticillata

HYDRILLA

Hydrocharitaceae

Common Synonyms: *none*

FLEPPC Category: 1

FDACS Listed Noxious Weed: No

IFAS Assessment

North	PROHIBITED
Central	PROHIBITED
South	PROHIBITED

USDA Hardiness Zone: 5a-11

Growth Habit: Aquatic perennial herb

Origin: Warmer regions of the Old World

Robert Vidéki, Doronicum Kft., Bugwood.org

Description: Aquatic, submersed, perennial herb with slender stems to 9 m long, many branched. Stems from rhizomes. Whorled leaves, 3-8 per whorl, with toothed margins, and 1-4 conical bumps on the underside of the midrib. Fleshy buds form in the leaf axils called turions, each with 3 sepals and petals, whitish and floating.

Note: Similar to Brazilian waterweed (*Egeria densa*), also a non-native invasive, which has whorls of 3-6 leaves and no conical bump on midrib.

Habitat: lakes, rivers

Florida Introduction Date: 1960

Control Methods: Mechanical: Physical removal by raking or seining, but it will reestablish from any remaining fragments (Texas A&M)..

Chemical: Several chemicals have been successfully used to treat Hydrilla: diquat, endothall, flouridone, imazamox, penoxsulam, bispyribac-sodium, and flumioxazin. [Texas A&M: <https://aquaplant.tamu.edu/management-options/hydrilla/>, IFAS: <http://edis.ifas.ufl.edu/ag370>].
